SUMMARY

I am a Data Analyst with a strong understanding of data analysis and visualization, skilled in using Python (NumPy, Pandas, Seaborn, Matplotlib), SQL, Power BI, and Advanced Excel. I have experience in data cleaning, transforming raw data into meaningful insights, and building interactive dashboards. I enjoy working in team environments to analyze and solve real-world problems and aim to use my skills to deliver data-driven solutions while continuously expanding my knowledge. I am also actively exploring and building a foundation in Machine Learning and Artificial Intelligence, with the goal of integrating predictive analytics and intelligent solutions into my future work.

EXPERIENCE

Nexus Ai Digital

Data Scientist & Machine Learning

Faisalabad, Pakistan

Sep 2025 – Nov 2025

- Developed and deployed **AI/ML models** using traditional ML algorithms for real-world datasets.
- Performed data preprocessing, and exploratory data analysis with Pandas and MySQL.
- Applied **NLP techniques** for text classification, sentiment analysis, and natural language understanding.

EDUCATION

National Textile University

Bachelor of Science in Computer Science

Faisalabad, Pakistan

Sep 2023 – Oct 2027

PROJECTS

House Price Prediction | Python, Flask, Scikit-learn, ML

July 2026

- Built and deployed a Gradient Boosting Regression model in Scikit-learn to predict house prices from 21,000+ King County property records, achieving an R^2 of 0.92.
- Engineered and preprocessed features from property attributes such as location, living area, grade, and condition using Python, Pandas, and NumPy.
- Developed and deployed an interactive Flask web application with a Bootstrap 5 interface, allowing users to input property details and instantly view predicted prices.

Mobiles Sales Analysis | Power Query, Power BI, DAX, MySQL, Excel

April 2026

- Perform required transformation on data to make it suitable for analysis using Power Query.
- Structure the dataset and model business transactions to perform SQL-based analysis on customer segmentation, retention patterns, and key buying behaviors.
- Build an interactive dashboard that highlights key patterns and trends using Power BI.

Banking-Credit-Risk-Loan-Portfolio-Dashboard | Power BI, MySQL, Power Query, Excel

June 2026

- Clean and transform 255,347 loan records using Power Query, handling null values and structuring data for credit risk analysis.
- Engineer DAX measures and calculated columns including Age Group segmentation, YoY default rate tracking, and total loan volume aggregations to model business risk scenarios.
- Build a 3-page interactive dashboard covering loan default trends, applicant demographics, and financial risk matrices, enabling stakeholders to identify high-risk borrower segments by employment type, income bracket, and credit score.

TECHNICAL SKILLS

Languages: C/C++, Python, JavaScript, MY SQL

Libraries: NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn

Data Analytics & Visualization: Excel, Power Query, Power BI, DAX

CERTIFICATIONS

- Python ([View Certification](#))
- Advance SQL ([View Certification](#))
